

Chemical Manufacturing

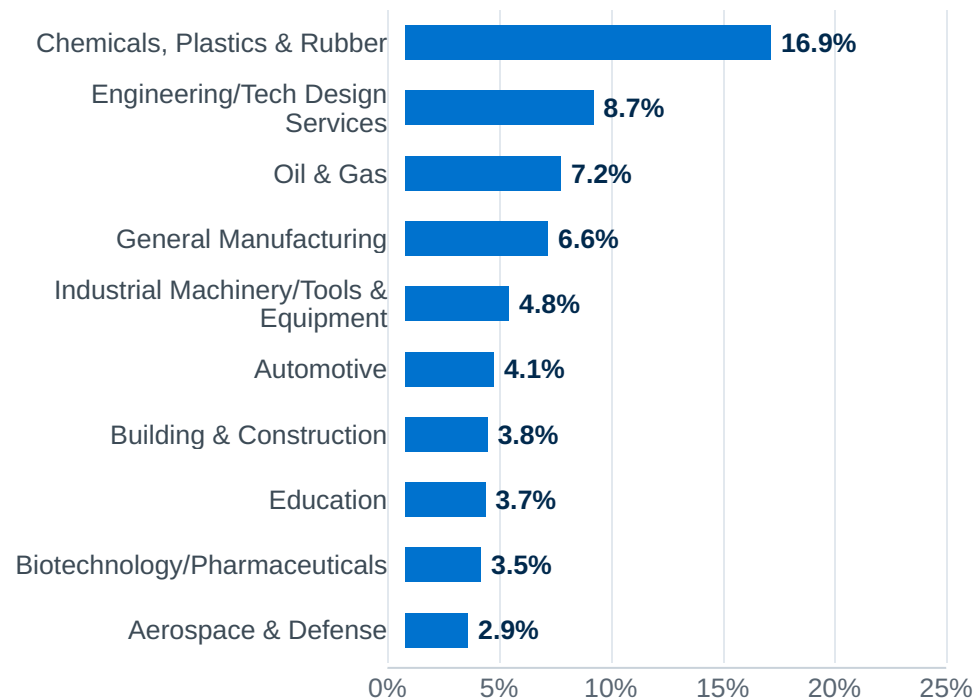

GlobalSpec's Chemical Manufacturing Newsletter covers the design, construction, and operation of plants and machinery for making such products as acids, dyes, drugs, plastics, and synthetic rubber by adapting the chemical reactions discovered by the laboratory chemist to large-scale production. The chemical process industry (CPI) draws on a broad range of engineering technology to develop and manufacture industrial and specialty chemicals used in pharmaceutical, biotechnology, and drug discovery. These chemicals are also used in the production of specialized coatings, lubricants, plastics, and textiles.
